

The Platinum Standard

MJ Platinum HD

The MJ Platinum HD design customizes the aspheric compensation in the progressive channel based on the patient's complete Rx. This results in much wider viewing areas throughout the lens.

The MJ Platinum HD lenses are available in a wide variety of materials and lens treatment options, and all lens materials.

- MJ Platinum uses a universal blended design that provides ample distance vision and a wide reading area. It is a good choice for emerging presbyopes, as well as experienced wearers. MJ Platinum HD is suited for all add power prescriptions and difficult Rx's.
- Advanced aspheric compensation in the intermediate and near zones reduces aberrations and compensates for pantoscopic tilt to provide the best optics in the as-worn position.
- Available in three corridor lengths: 10, 12, and 14mm, with three fitting heights, respectively at 14, 16, and 18mm.
